147 mm

Data formats

Vector EPS data from the following programs can be processed: Corel Draw X6, Adobe Illustrator CS 2, Macromedia Freehand MX. Furthermore writing must be converted to paths (curves).

Minimum line width for silkscreen print

Due to the limitations in printing technology, the line width may not be smaller than 0.18 mm.

Photographs for label print, doming or LipBox

Photographs are to be supplied with a resolution of at least 300 dpi TIFF (CMYK) in original size. To minimise colour variation, a colour print should be enclosed with the order.

Print tolerances

In silkscreen printing the gauge-pins tolerances for multicoloured prints can lie at up to +/- 0.3 mm.

Colour details for printing

We kindly request that all details for colour printing are supplied in Pantone or HKS.
